Enclosed please find the reduced test validation package for the changes to the vital application software at CP XXXX House A.

The package contains a layout of the location, the reduced test validation procedure, difference report showing the software changes, and recommended checkout procedures.

The changes made were to provide unique network ID's for each main and remote unit as well as setting RP2009 as the default vital link protocol.

If you have any questions, please give us a call.

Sincerely,

Label1
